

CIS 665 – Peer Evaluation Form for PHP Project

Evaluate the quality/quantity of each team member's contribution by dividing 100 points among the team members. The total points assigned should equal 100. Consequently, team members contributing less than their fair share should be assigned fewer points while team members contributing more than their fair share should be assigned more points.

Team Member	Points
Your name: Robert Palumbo	50
Kiana Vigil	35
Valerie Duran	15
Total	100

Comments (optional)

While Kiana and Valeria tried to assist in this PHP based project they found it difficult to handle the programmatic aspects of the project. I fully implemented the entire database architecture, a full suite of test modules demonstrating how to create web form to access the database for all supported functionality. I created the development architecture. I implemented almost all the PHP structure and coding. Valeria and Kiana created the initial HTML pages for the project. However, the design was only for HTML and was not structured at all to support PHP with embedded HTML as shown in class lectures and assignments. Thus, I had to convert all the HTML pages into a suitable format for use with PHP. I then pretty much implemented most of the PHP functionality.

Kiana was very instrumental in CSS styling creating the look and feel of the website. Valerie assisted in this as well. Kiana also implemented adding PHP structure for property reviews. Valerie tried but implementing PHP support for reservations but just couldn't grasp getting things to work. I had to take on this task at the last moment to complete it. For almost all other PHP support I was the primary implementor for it.

I feel my breakdown in point distribution is fair in the context of individual contributions to this project.
