

CIS 665 - Final Exam – Part 1
Due Date: Saturday, May 4 @ 11:59 PM

- 1) Identify any two entities (do not repeat the example entities shown below) that share a one-to-many relationship. The entity on the one-side of the relationship should have an identifier and a minimum of one other attribute. The entity on the many side of the relationship should have an identifier and a minimum of three other attributes – one of these attributes should have string values (e.g., EmployeeName) and another, numeric values (e.g., EmployeeSalary).

Example:

- 2) Convert the entities to relations.

Example:

DEPARTMENT (**DepartmentPK**, DepartmentName)

EMPLOYEE (**EmployeePK**, EmployeeName, EmployeeSalary, EmployeeHireDate, DepartmentFK)

- 3) Identify a relation for storing user information (could be the same as the example shown below).

Example:

USERINFO (**UserPK**, UserFirstName, UserLastName, UserLoginName, UserLoginPassword)

- 4) On eLab, using either SQL Server Management Studio or Visual Studio, connect to BUSCISSQL1601\CISWEB and access your exam database using SQL server authentication. Your database will be named with your last name followed by ExamDB (e.g., MontagueExamDB). Use your eName for username and nine digit CSU ID for password.
- 5) Create the tables, columns and constraints for the relations identified in steps 2 and 3. Use auto-generated PKs.
- 6) Populate the table that is the source of the foreign key (e.g., Department), with a minimum of **five** records. Populate the table with the foreign key (e.g., Employee), with a minimum of **ten** records. The user information table (e.g., UserInfo), should have a minimum of **three** records.

Submission Requirements

Attach a document showing the conceptual and logical models (similar to the examples for steps 1 to 3) for the tables in your database.
